Professional with high interest in continuous learning and growth. Looking forward to working and growing alongside the company's goals, putting all my back-end knowledge at disposal to achieve the best possible results. Currently focused on enhancing my backend skills and deepening my Laravel knowledge.

EXPERIENCE

All-Ways Forwarding — *Software Developer*
July 2024 - PRESENT

- Improved the notification system by allowing the users to directly interact with it and handle whatever was required right there no matter where they were on the page. Decreased the time users had to spend going somewhere else on our app to handle what was needed. Additionally, shifted the logic behind the notification system to allow for many different types, improving scalability.
- Reconstructed the whole chat feature to facilitate complex client requests and made it more visually appealing. The goal was to shift our users from using external chats to our chat system and add features within the chat that allow the users to easily interact with our app and fulfill their needs.
- Collaborating in actively creating/improving our latest project towards our clients. Creating a robust system that could handle many different users with different approaches and needs in a single service.

Technologies: Vue/Laravel/MySQL/Git

EDUCATION

INTEC — *Mechatronics Engineering*
Zero To Mastery — *Certifications:*
- Complete NodeJS Developer
- DSA
- Introduction to Networking
- Complete Web Developer
- Complete React Developer
- Efficient Learning

PROJECTS

Nasa Project — *NodeJS, MongoDB, REST API, AWS EC2, Docker*
App that retrieves habitable kepler exoplanets from a CSV file. Schedule future launches to these exoplanets and retrieve past launches from a NASA API. All stored in MongoDB. The project was containerized using docker and launched using AWS EC2.

E-commerce App — *React, Typescript, Tailwind, Firebase*
Online store app that uses Firebase's services to handle Authentication and Authorization. The main goal was to connect with their services and deploy on Vercel. Additionally, implementing React Context and React Router.

Nintendo Website — *React, Typescript*
A simple copy of one of Nintendo Website's pages. Made to challenge myself and use all the FrontEnd knowledge at the time to build a complex page as such from scratch by just following the mock up.

HARD SKILLS

HTML / CSS / T ailwind

Javascript / Typescript / NodeJS / PHP

React / Vue / ExpressJS / Laravel

MySQL / PostgreSQL / MongoDB / Redis

Firebase / Vercel

Git / GitHub

SOFT SKILLS

Time Management
Quick Learner
Communication
Problem Solving
Critical Thinking
Teamwork
Adaptability

LANGUAGES

Spanish – Native
English – Advanced
